Vladislav Sobol

Specialization: Fullstack Engineer (React / TypeScript / Node.js / NestJS)
Level: Senior / Lead
Location: Vitebsk, Republic of Belarus
Email / Telegram / GitHub: sobol.work.v92@gmail.com / @VladilenS_tg / github.com/mirego2013

Summary

Frontend Engineer with 6+ years of commercial experience in React, TypeScript, JavaScript.
Specialization: high-load SPAs, B2B systems and CRMs with role-based access and REST API integration. Experience in banking, LegalTech, logistics and micromobility.
What I do: design the architecture of frontend applications, microfrontends and UI Kit; launch projects from scratch; optimize performance; build testing systems; conduct code review, onboarding and mentoring; work in cross-functional full-cycle teams.
Backend skills: I work with Node.js (NestJS, Express), design and integrate REST API (OpenAPI), and have hands-on experience with PostgreSQL and MongoDB, Docker and Nginx — enough to deliver a feature vertical end-to-end

Key Skills

- **Languages / scripting:** TypeScript, JavaScript (ES6+ / ES2023)
- **Frameworks / platforms:** React, Next.js, Node.js, NestJS, Express, React Router, TanStack React Router, WordPress; state management: Redux Toolkit, RTK Query, MobX, Zustand, TanStack React Query; UI: Material UI, Ant Design, HeroUI, Tailwind CSS, Styled Components, CSS Modules, SCSS / Sass; forms & validation: React Hook Form, Formik, Zod; testing: Jest, React Testing Library, Cypress
- **Architecture / approaches:** SPA, SSR, SSG, Microfrontend, Feature-Sliced Design (FSD), SOLID, design patterns
- **Databases:** PostgreSQL, MongoDB
- **DevOps / Cloud / CI/CD:** Git, GitLab, CI/CD, Docker, Nginx; build tools: Vite, Webpack, Babel
- **Integrations / Messaging:** REST API, OpenAPI, openapi-fetch, Axios, HTTP, JSON, WebSocket
- **Tools / methodologies:** Jira, Confluence, Figma, Chrome DevTools, ESLint, Prettier, Husky, lint-staged

PROJECT 1 — Agent & Partner Portal / Contract Management System

Company / client: VTB Bank
Industry / domain: FinTech / banking (SMB, B2B)
Period: 12.2021 — 07.2026
Role: Senior Frontend Engineer
Work format: remote
Team: 12 backend, 6 frontend, 6 QA, 4 analyst, DevOps, Team Lead, PM

Project Description

Self-service portal (SMB) and contract management system for the bank's agents and partners: contract execution, application submission and banking product management.

Responsibilities

- Developed client-facing interfaces of the agent and partner portal for contract execution, application submission and banking product management (React, TypeScript, MobX).
- Designed and implemented the application's microfrontend architecture; carried out a large-scale refactoring of legacy code, upgrading Node.js from version 14 to 24.
- Developed the internal UI Kit of reusable components.
- Wrote unit tests and set up e2e testing from scratch (Jest, React Testing Library, Cypress).
- Migrated the Webpack configuration and project infrastructure settings from JavaScript to TypeScript, unifying the build configuration and typing of infrastructure code.
- Introduced code quality practices: ESLint, Prettier, Husky, lint-staged, checks in CI/CD.
- Conducted code review, onboarding and mentoring for 5 developers; distributed tasks, took part in planning and estimation.
- Collaborated with backend developers, analysts, designers and QA on designing new modules, task decomposition and release support.

Results / Achievements

- Reduced bundle size by more than 55% (tree shaking, lazy loading, code splitting, dependency analysis) — less JavaScript to load, improved FCP, LCP and TBT.
- Expanded the UI Kit from 10 to 30 components, reducing the team's development time for new screens by about 40%.
- Brought test coverage up to 80%.
- Automated code checks before commits and releases.

Tech stack: React, TypeScript, JavaScript, MobX, React Router, REST API, Axios, Webpack, Babel, Docker, Nginx, Git, CI/CD, Jest, React Testing Library, Cypress, SPA, Microfrontend, Feature-Sliced Design

PROJECT 2 — Scooter Admin CRM (contract, alongside main employment)

Company / client: Sparkit (software development, Belarus) / BE Happy – e-scooter sharing service
Industry / domain: Micromobility / e-scooter sharing
Period: 08.2025 — 11.2025
Role: Lead Frontend Engineer
Work format: remote
Team: sole frontend developer, 1 backend

Project Description

CRM for managing and monitoring an e-scooter fleet: control of scooters, users, riding zones and operational processes.

Responsibilities

- Designed the project structure, set up the engineering infrastructure, development environment and team standards; made key technical decisions on the stack.
- Implemented routing and role-based access (administrator / operator / technician) using TanStack React Router.
- Integrated the client with the backend via OpenAPI using openapi-fetch; set up data caching with TanStack React Query.
- Built tables with sorting, filtering and pagination, and fleet monitoring interfaces (status, battery level, geolocation); responsive layout with Tailwind CSS + HeroUI.

Results / Achievements

- Took the web application from scratch to a working product in about 3 months.
- Fleet monitoring supports more than 500 vehicles.
- The architecture, dev environment and standards I established became the foundation on which the in-house team continued to develop the product.

Tech stack: React, TypeScript, TanStack React Query, TanStack React Router, openapi-fetch, Zustand, Tailwind CSS, HeroUI, Vite, NestJS, PostgreSQL

PROJECT 3 — Law Portal

Company / client: General Soft (software development, Belarus) / client under NDA – a platform supporting legal proceedings
Industry / domain: LegalTech
Period: 08.2020 — 09.2021
Role: Frontend Engineer
Work format: office
Team: 2 backend, 2 frontend

Project Description

A platform supporting civil, administrative and criminal proceedings: case management, status tracking, financial data handling and role-based access control.

Responsibilities

- Developed client-facing and internal interfaces of the legal platform for more than six user roles.
- Implemented authentication, registration and role-based access (lawyer / plaintiff / client / witness / defendant).
- Built interactive dashboards with charts (Recharts) for financial metrics and case statuses.
- Set up a notification system for case status changes via pop-up windows.
- Implemented the in-app chat using WebSocket.

Results / Achievements

- Optimized interface performance when working with large data volumes and financial dashboards.
- Enabled real-time messaging between case participants.

Tech stack: React, JavaScript, Redux, React Router, Recharts, Axios, Styled Components, Webpack, Docker, WebSocket

Earlier / Additional Projects

- **Kitchen Space** (03.2020 — 08.2020), Frontend Engineer. A commercial kitchen rental platform: order and request management interface, form validation, integration with payment and invoicing APIs. *React, JavaScript, Formik, Axios, Styled Components.*
- **Vezetvsem** (05.2019 — 12.2019), Frontend Engineer. A freight transportation request platform: request interfaces with filtering, sorting and search, integration with delivery status APIs. *React, JavaScript, Flux, SCSS, Axios.*
- **Freelance: landing pages for small businesses**:
  - beauty salon website: services, promotions, feedback forms, online booking integration; *WordPress* — beauty-vitebsk.by
  - landing page for the "Sova" children's development center: programs, reviews, FAQ, trial class booking; *Next.js* — sovafamilycenter.by

Work Format & Availability

Preferred format: remote (Russia / Belarus / international projects) or hybrid (Belarus)
Employment type: full-time
Open to business trips: yes
Open to relocation: yes (Minsk, Moscow, Saint Petersburg)
Availability: ASAP

Education & Languages

Higher education: Bachelor's degree in Law (lawyer with a specialization in economics), 2014
Additional education / courses: self-study of official documentation (MDN, specifications), hands-on projects; ongoing skill development on commercial projects
Foreign languages: English — B1 (reading technical documentation, written communication)
